ELSEVIER

Thin Solid Films 297 (1997) 327–331

thin solid films

Subject Index of Volume 297

Absorption
relevance of the carrier transport change in porous silicon at the onset of one excited pair per crystallite, 125
Aerogels
aerogels: production, characterization, and applications, 212
Aluminium oxide
fabrication and characterisation of Al_2O_3 porous bodies by hot isostatic pressing, 207
Anisotropy
porous silicon anisotropy investigated by guided light, 245
Annealing
fabrication of silicon nanocrystallites by oxidation/annealing of polysilane films and their luminescence properties, 183
Anodic alumina
porous anodic alumina: fabrication, characterization and applications, 192
Anodic oxidation
deep "cold" junctions by porous silicon impregnation, 321
Anodization
photoluminescence from thin porous films of silicon carbide, 229
Atomic layer epitaxy
porous silicon host matrix for deposition by atomic layer epitaxy, 39

Biocompatibility
nanostructured semiconductors: compatibility with biomaterials, 308
Brillouin scattering
brillouin scattering of porous silicon, 110

Calcification
calcium phosphate nucleation on porous silicon: factors influencing kinetics in acellular simulated body fluids, 304
Capacitive deionization
aerogels: production, characterization, and applications, 212
Carrier transport
relevance of the carrier transport change in porous silicon at the onset of one excited pair per crystallite, 125
porous silicon diodes operated near the electroluminescence threshold, 277
CdTe
investigation on the electrochemical deposition of cadmium telluride in porous silicon, 35
Ceramics
fabrication and characterisation of Al_2O_3 porous bodies by hot isostatic pressing, 207
Cerenkov detectors
aerogels: production, characterization, and applications, 212
Characterization
porous anodic alumina: fabrication, characterization and applications, 192
Clusters
luminescence and Raman characterization of molecular and nanocrystalline silicon clusters, 188
Coatings
the porous silicon emitter concept applied to multicrystalline silicon solar cells, 291
chemically etched porous silicon as an anti-reflection coating for high efficiency solar cells, 296
Cold cathodes
operation of electroluminescent porous silicon diodes as surface-emitting cold cathodes, 314
Colour
color-sensitive photodetector based on porous silicon superlattices, 241
Composition
time evolution of surface porous silicon composition under different post-etch treatments, 118
Computer simulation
a new line shape analysis of Raman emission in porous silicon, 122
Contacts
photoconductivity of porous silicon in contact with a liquid electrolyte, 64

Dephasing time
femtosecond dephasing in porous silicon, 135
Differential scanning calorimetry
investigation of phase transitions of organic fluids confined in porous silicon, 68
Diffusion
deep "cold" junctions by porous silicon impregnation, 321
Directional site percolation
computer simulation of percolated porous Si structure and its application to electrical conductivity simulation, 88
Drying
characterisation of freeze-dried porous silicon, 73

Elastomechanical properties
aerogels: production, characterization, and applications, 212
Electrical conductivity simulation
computer simulation of percolated porous Si structure and its application to electrical conductivity simulation, 88
Electrical measurements and properties
porous silicon layers used for gas sensor applications, 317
Electrochemical etching
the limits of macropore array fabrication, 13
Electrochemistry
photoconductivity of porous silicon in contact with a liquid electrolyte, 64
porous anodic alumina: fabrication, characterization and applications, 192
Electroluminescence
preparation of thin porous silicon layers by stain etching, 9
electroluminescent solid state devices based on silicon nanowires, fabricated by using lithography and etching techniques, 176
stable photoluminescence and electroluminescence from porous silicon, 254
technology and RBS analysis of porous silicon light-emitting diodes, 268

Elsevier Science S.A.

porous silicon diodes operated near the electroluminescence threshold, 277
investigation of the mechanisms controlling the stability of a porous silicon electroluminescent device, 281
electrical, photoelectrical and electroluminescent properties of porous Si–c-Si heterojunctions, 285
operation of electroluminescent porous silicon diodes as surface-emitting cold cathodes, 314
Electroluminescence stability
investigation of the mechanisms controlling the stability of a porous silicon electroluminescent device, 281
Electronic properties
electronic and mechanical properties of nanocrystalline composites when approaching molecular size, 145
Electron microscopy
X-ray diffraction and electron microscopy investigation of porous $Si_{1-x}Ge_x$, 233
Electron wave functions
the electronic energy levels of Si-based nanocrystalline materials: theory compared with experiment, 163
Erbium
porous silicon as low-dimensional host material for erbium-doped structures, 48
erbium and terbium photoluminescence in silica sol–gel films on porous alumina, 202
Etching techniques
electroluminescent solid state devices based on silicon nanowires, fabricated by using lithography and etching techniques, 176

Fabrication
porous anodic alumina: fabrication, characterization and applications, 192
fabrication and characterisation of Al_2O_3 porous bodies by hot isostatic pressing, 207
Fast blue photoluminescence
the origin of the fast blue photoluminescence from spark processed silicon, 171

Gas sensors
porous silicon layers used for gas sensor applications, 317
Germanium
X-ray diffraction and electron microscopy investigation of porous $Si_{1-x}Ge_x$, 233

Heterostructure
photosensitivity of silicon–porous silicon heterostructures, 129
Host material
porous silicon as low-dimensional host material for erbium-doped structures, 48
Hot isostatic pressing
fabrication and characterisation of Al_2O_3 porous bodies by hot isostatic pressing, 207
Hydrocarbon sensor fabrication
porous silicon layer permeated with Sn–V mixed oxides for hydrocarbon sensor fabrication, 43
Hydrogen
implanted muon states in porous silicon, 84
Hydrogen incorporation
relationship between porous silicon formation and hydrogen incorporation, 1
Hydrogen passivation
optical properties of isolated and interacting silicon quantum wires, 154

Implants
implanted muon states in porous silicon, 84
Infrared spectroscopy
chemical surface modification of porous silicon using tetraethoxysilane, 26
Interface
quantitative analysis of the light scattering effect on porous silicon optical measurements, 114
Interference filters
the application of porous silicon interference filters in optical sensors, 250

Kinetics
calcium phosphate nucleation on porous silicon: factors influencing kinetics in acellular simulated body fluids, 304

Light emission
progress in the field of integrated optoelectronics based on porous silicon, 265
Light emitting diode
porous silicon n–p light emitting diode, 272
Light propagation
porous silicon anisotropy investigated by guided light, 245
Light scattering
quantitative analysis of the light scattering effect on porous silicon optical measurements, 114
Linear combination of atomic orbitals
the electronic energy levels of Si-based nanocrystalline materials: theory compared with experiment, 163
Lithography
electroluminescent solid state devices based on silicon nanowires, fabricated by using lithography and etching techniques, 176
Localization
quasi-confinement, localization and optical properties in porous silicon, 261
Low-dimensional structures
molecular beam epitaxial growth of low dimensional silicon structures embedded in CaF_2, 179
Luminescence
electrochemistry and photoluminescence of porous amorphous silicon, 5
on the use of surfactants in the electrochemical preparation of porous silicon, 18
investigation on the electrochemical deposition of cadmium telluride in porous silicon, 35
in-situ photoluminescence studies of porous silicon in liquids, 53
time evolution of surface porous silicon composition under different post-etch treatments, 118
the electronic energy levels of Si-based nanocrystalline materials: theory compared with experiment, 163
molecular beam epitaxial growth of low dimensional silicon structures embedded in CaF_2, 179
fabrication of silicon nanocrystallites by oxidation/annealing of polysilane films and their luminescence properties, 183
luminescence and Raman characterization of molecular and nanocrystalline silicon clusters, 188
erbium and terbium photoluminescence in silica sol–gel films on porous alumina, 202
Luminescence polarization anisotropy
Raman scattering and luminescence polarization anisotropy in porous Si, 102

Macropore array fabrication
the limits of macropore array fabrication, 13
Mechanical properties
electronic and mechanical properties of nanocrystalline composites when approaching molecular size, 145
Microstructure
evidence of anisotropic structures of free-standing porous silicon films, 79

Molecular beam epitaxy
molecular beam epitaxial growth of low dimensional silicon structures embedded in CaF_2, 179

Nanocrystalline tin oxide
porous silicon host matrix for deposition by atomic layer epitaxy, 39
Nanocrystallites
time-resolved photoluminescence characterization of nm-sized silicon crystallites in SiO_2, 167
Nanocrystals
luminescence from deuterium-terminated porous silicon, 31
electronic and mechanical properties of nanocrystalline composites when approaching molecular size, 145
Nanostructures
investigation on the electrochemical deposition of cadmium telluride in porous silicon, 35
fabrication of silicon nanocrystallites by oxidation/annealing of polysilane films and their luminescence properties, 183
luminescence and Raman characterization of molecular and nanocrystalline silicon clusters, 188
nanostructured semiconductors: compatibility with biomaterials, 308
Nanowires
electroluminescent solid state devices based on silicon nanowires, fabricated by using lithography and etching techniques, 176
Non-linear spectroscopy
femtosecond dephasing in porous silicon, 135

Optical and infrared properties
aerogels: production, characterization, and applications, 212
Optical properties
characterisation of freeze-dried porous silicon, 73
visual determination of thickness and porosity of porous silicon layers, 97
optical properties of isolated and interacting silicon quantum wires, 154
quasi-confinement, localization and optical properties in porous silicon, 261
Optical sensors
the application of porous silicon interference filters in optical sensors, 250
Optical spectroscopy
analysis of the depth homogeneity of p-PS by reflectance measurements, 92
Optoelectronics
progress in the field of integrated optoelectronics based on porous silicon, 265
Organic fluids
investigation of phase transitions of organic fluids confined in porous silicon, 68
Oxidation
fabrication of silicon nanocrystallites by oxidation/annealing of polysilane films and their luminescence properties, 183
dielectric filters made of PS: advanced performance by oxidation and new layer structures, 237

Phase transitions
investigation of phase transitions of organic fluids confined in porous silicon, 68
Photocells
electrical, photoelectrical and electroluminescent properties of porous Si–c-Si heterojunctions, 285
Photoconductivity
photoconductivity of porous silicon in contact with a liquid electrolyte, 64
Photodetectors
color-sensitive photodetector based on porous silicon superlattices, 241
Photoelectron spectroscopy
UV ($h\nu = 8.43$ eV) photoelectron spectroscopy of porous silicon near Fermi level, 142
Photolithography
progress in the field of integrated optoelectronics based on porous silicon, 265
Photoluminescence
preparation of thin porous silicon layers by stain etching, 9
luminescence from deuterium-terminated porous silicon, 31
photo-assisted continuous tuning of photoluminescence spectra of porous silicon, 61
characterization of porous silicon by Raman scattering and photoluminescence, 106
UV ($h\nu = 8.43$ eV) photoelectron spectroscopy of porous silicon near Fermi level, 142
time-resolved photoluminescence characterization of nm-sized silicon crystallites in SiO_2, 167
photoluminescence from thin porous films of silicon carbide, 229
stable photoluminescence and electroluminescence from porous silicon, 254
electrical, photoelectrical and electroluminescent properties of porous Si–c-Si heterojunctions, 285
Photosensitivity oscillations
photosensitivity of silicon–porous silicon heterostructures, 129
Photovoltaic effects
observation of the photovoltaic and related effects in porous silicon by scanning tunneling microscopy, 138
PL
influence of etch stops on the microstructure of porous silicon layers, 22
Polarization
photosensitivity of silicon–porous silicon heterostructures, 129
Porosity
visual determination of thickness and porosity of porous silicon layers, 97
raman scattering and luminescence polarization anisotropy in porous Si, 102
Porosity gradient
influence of etch stops on the microstructure of porous silicon layers, 22
Porous
chemically etched porous silicon as an anti-reflection coating for high efficiency solar cells, 296
Porous alumina
erbium and terbium photoluminescence in silica sol–gel films on porous alumina, 202
Porous silicon
preparation of thin porous silicon layers by stain etching, 9
influence of etch stops on the microstructure of porous silicon layers, 22
chemical surface modification of porous silicon using tetraethoxysilane, 26
luminescence from deuterium-terminated porous silicon, 31
porous silicon host matrix for deposition by atomic layer epitaxy, 39
porous silicon layer permeated with Sn–V mixed oxides for hydrocarbon sensor fabrication, 43
photo-assisted continuous tuning of photoluminescence spectra of porous silicon, 61
photoconductivity of porous silicon in contact with a liquid electrolyte, 64
investigation of phase transitions of organic fluids confined in porous silicon, 68
characterisation of freeze-dried porous silicon, 73
evidence of anisotropic structures of free-standing porous silicon films, 79
implanted muon states in porous silicon, 84

characterization of porous silicon by Raman scattering and photoluminescence, 106
brillouin scattering of porous silicon, 110
time evolution of surface porous silicon composition under different post-etch treatments, 118
a new line shape analysis of Raman emission in porous silicon, 122
relevance of the carrier transport change in porous silicon at the onset of one excited pair per crystallite, 125
photosensitivity of silicon–porous silicon heterostructures, 129
investigation of the surface topography of light emitting nanostructures of porous Si and the related photovoltaic effect by photoassisted scanning tunnelling microscopy, 132
femtosecond dephasing in porous silicon, 135
observation of the photovoltaic and related effects in porous silicon by scanning tunneling microscopy, 138
UV ($h\nu = 8.43$ eV) photoelectron spectroscopy of porous silicon near Fermi level, 142
color-sensitive photodetector based on porous silicon superlattices, 241
porous silicon anisotropy investigated by guided light, 245
the application of porous silicon interference filters in optical sensors, 250
stable photoluminescence and electroluminescence from porous silicon, 254
quasi-confinement, localization and optical properties in porous silicon, 261
progress in the field of integrated optoelectronics based on porous silicon, 265
technology and RBS analysis of porous silicon light-emitting diodes, 268
porous silicon n–p light emitting diode, 272
porous silicon diodes operated near the electroluminescence threshold, 277
investigation of the mechanisms controlling the stability of a porous silicon electroluminescent device, 281
electrical, photoelectrical and electroluminescent properties of porous Si–c-Si heterojunctions, 285
the porous silicon emitter concept applied to multicrystalline silicon solar cells, 291
high-efficiency solar cell using a thin porous silicon layer, 299
calcium phosphate nucleation on porous silicon: factors influencing kinetics in acellular simulated body fluids, 304
operation of electroluminescent porous silicon diodes as surface-emitting cold cathodes, 314
porous silicon layers used for gas sensor applications, 317

Porous silicon waveguides
light guiding in oxidised porous silicon optical waveguides, 311

Post-etch treatments
time evolution of surface porous silicon composition under different post-etch treatments, 118

Power devices
deep "cold" junctions by porous silicon impregnation, 321

PS layers
dielectric filters made of PS: advanced performance by oxidation and new layer structures, 237

Quantum size effects
luminescence from deuterium-terminated porous silicon, 31

Quantum wires
optical properties of isolated and interacting silicon quantum wires, 154

Quasi-confinement
quasi-confinement, localization and optical properties in porous silicon, 261

Raman
influence of etch stops on the microstructure of porous silicon layers, 22

Raman scattering
raman scattering and luminescence polarization anisotropy in porous Si, 102
characterization of porous silicon by Raman scattering and photoluminescence, 106
a new line shape analysis of Raman emission in porous silicon, 122
luminescence and Raman characterization of molecular and nanocrystalline silicon clusters, 188

Raman spectroscopy
on the use of surfactants in the electrochemical preparation of porous silicon, 18

Random resistor network
computer simulation of percolated porous Si structure and its application to electrical conductivity simulation, 88

RBS
technology and RBS analysis of porous silicon light-emitting diodes, 268

Reflection spectroscopy
analysis of the depth homogeneity of p-PS by reflectance measurements, 92

Reflectivity
quantitative analysis of the light scattering effect on porous silicon optical measurements, 114

Roughness
quantitative analysis of the light scattering effect on porous silicon optical measurements, 114

Scanning electron microscopy
microstructure and photoluminescence of electrochemically etched porous SiC, 224

Scanning tunneling microscopy
observation of the photovoltaic and related effects in porous silicon by scanning tunneling microscopy, 138

Scanning tunnelling microscopy
investigation of the surface topography of light emitting nanostructures of porous Si and the related photovoltaic effect by photoassisted scanning tunnelling microscopy, 132

Semiconducting oxides
porous silicon layer permeated with Sn–V mixed oxides for hydrocarbon sensor fabrication, 43

Silicon
relationship between porous silicon formation and hydrogen incorporation, 1
electrochemistry and photoluminescence of porous amorphous silicon, 5
investigation on the electrochemical deposition of cadmium telluride in porous silicon, 35
porous silicon as low-dimensional host material for erbium-doped structures, 48
in-situ photoluminescence studies of porous silicon in liquids, 53
analysis of the depth homogeneity of p-PS by reflectance measurements, 92
visual determination of thickness and porosity of porous silicon layers, 97
optical properties of isolated and interacting silicon quantum wires, 154
time-resolved photoluminescence characterization of nm-sized silicon crystallites in SiO_2, 167
fabrication of silicon nanocrystallites by oxidation/annealing of polysilane films and their luminescence properties, 183
luminescence and Raman characterization of molecular and nanocrystalline silicon clusters, 188
erbium and terbium photoluminescence in silica sol–gel films on porous alumina, 202
X-ray diffraction and electron microscopy investigation of porous $Si_{1-x}Ge_x$, 233

chemically etched porous silicon as an anti-reflection coating for high efficiency solar cells, 296
deep "cold" junctions by porous silicon impregnation, 321
Silicon carbide
microstructure and photoluminescence of electrochemically etched porous SiC, 224
photoluminescence from thin porous films of silicon carbide, 229
Silicon dioxide
time-resolved photoluminescence characterization of nm-sized silicon crystallites in SiO_2, 167
Silicon waveguides
light guiding in oxidised porous silicon optical waveguides, 311
Single–electron tunneling
observation of the photovoltaic and related effects in porous silicon by scanning tunneling microscopy, 138
Site percolation
computer simulation of percolated porous Si structure and its application to electrical conductivity simulation, 88
Solar cells
the porous silicon emitter concept applied to multicrystalline silicon solar cells, 291
chemically etched porous silicon as an anti-reflection coating for high efficiency solar cells, 296
high-efficiency solar cell using a thin porous silicon layer, 299
Sol–gel
erbium and terbium photoluminescence in silica sol–gel films on porous alumina, 202
aerogels: production, characterization, and applications, 212
Spark processed silicon
the origin of the fast blue photoluminescence from spark processed silicon, 171
Stain etch
chemically etched porous silicon as an anti-reflection coating for high efficiency solar cells, 296
Stain etching
preparation of thin porous silicon layers by stain etching, 9
Supercapacitors
aerogels: production, characterization, and applications, 212
Supercritical extraction
aerogels: production, characterization, and applications, 212
Superhard composites
electronic and mechanical properties of nanocrystalline composites when approaching molecular size, 145
Superlattices
color-sensitive photodetector based on porous silicon superlattices, 241
Surface effect
luminescence from deuterium-terminated porous silicon, 31
Surface modification
chemical surface modification of porous silicon using tetraethoxysilane, 26
Surface passivation
stable photoluminescence and electroluminescence from porous silicon, 254
Surface tension
on the use of surfactants in the electrochemical preparation of porous silicon, 18
Surface topography
investigation of the surface topography of light emitting nanostructures of porous Si and the related photovoltaic effect by photoassisted scanning tunnelling microscopy, 132

Technology improvement
high-efficiency solar cell using a thin porous silicon layer, 299
Terbium
erbium and terbium photoluminescence in silica sol–gel films on porous alumina, 202
Tetraethoxysilane
chemical surface modification of porous silicon using tetraethoxysilane, 26
Thermal oxidation
dielectric filters made of PS: advanced performance by oxidation and new layer structures, 237
Thermal properties
aerogels: production, characterization, and applications, 212
Thermal superinsulations
aerogels: production, characterization, and applications, 212
Thickness
visual determination of thickness and porosity of porous silicon layers, 97
Time-dependent photoluminescence
microstructure and photoluminescence of electrochemically etched porous SiC, 224
Transmission electron microscopy
a new line shape analysis of Raman emission in porous silicon, 122
Tuning
photo-assisted continuous tuning of photoluminescence spectra of porous silicon, 61

X-ray diffraction
X-ray diffraction and electron microscopy investigation of porous $Si_{1-x}Ge_x$, 233
